The proposed project will include trenching in the bottom of the Elizabeth River. There are no known underwater archaeological sites in the river. Due to the previous dredging in the river to keep the channel open to the shipyards upstream of the bridge, disturbance from the construction of the bridge, and disturbance from the previous installation of underwater cable, there is a low potential for significant archaeological resources in the bottom of the river. The project will have no effect on significant historic properties.	12/15/2022
