

Welcome

Welcome to the public scoping meeting for the I-64 Hampton Roads Bridge Tunnel (HRBT) Environmental Impact Statement (EIS).

The goals of this meeting are:

- To obtain your input on issues that should be considered in the EIS
- To share information that is available at this early stage of the study

Representatives of VDOT are available to answer your questions and listen to your thoughts and concerns.

Background and Study Intent

- VDOT completed the Hampton Roads Bridge Tunnel Expansion Feasibility Study in 2008. The study examined several build alternatives for the HRBT Corridor.
- Current EIS study is a required step for Federal approval before capacity improvements could be made.
- During this study, the study team will identify the transportation needs, develop reasonable alternatives, and evaluate likely environmental impacts.
